Kettle Moraine uses text levels to help identify a range of what students are able to read. When a reader engages in reading, and the text is challenging, we can support that reader in developing his skills, strategies, and confidence in two main ways. The first way is to find another or additional text that is the "right level" and one that the student can read more comfortably. In doing this, we scaffold the learner using the text. This is the most commonly used option around the small-group reading table. Another powerful way is to combine the use of instructional-level texts with more challenging texts. We work with students to understand that they are able to read within a range of texts, especially if they have prior knowledge of the topic they are reading. HERE are some of the benchmark ranges we use to help guide instruction.

You may get the form for input regarding class placement HERE. Please note that it is due to Cushing by April 15th.
